

Primary dental services: evidence categories

These services include:

- dental surgeries
- dental services that visit people in their homes
- out-of-hours emergency dental services

To assess services we look at evidence against our quality statements. We have grouped the types into 6 <u>evidence categories</u>.

We know there are differences in how services operate. We'll reflect this when we look at individual sources of evidence in our assessments.

> Information about evidence categories for sector groups of services
